The European Center for Disease Control has issued a case definition to be used when a human trichinellosis case or outbreak is suspected (Table 6). An algorithm for the diagnosis of acute trichinellosis and for defining very unlikely, suspected, probable, highly probable, and confirmed cases is shown in Table 7 (see reference 29).

### **Epidemiology, diagnosis, and control of poultry parasites ...**

Due to the predominantly zoonotic importance of infection, the main efforts in many countries have focused on the control of Trichinella or the elimination of Trichinella from the food chain. The most important source of human infection worldwide is the domestic pig, but, e.g., in Europe, meats of horses and wild boars have played a significant ...

The disease occurs mostly in the rain forests of central and western Africa. People living in or near the forested areas may have indirect or low-level exposure, possibly leading to subclinical infection. However, the disease recently emerged in the United States in imported wild rodents from Africa.

Epidemiology is the study (scientific, systematic, data-driven) of the distribution (frequency, pattern) and determinants (causes, risk factors) of health-related states and events (not just diseases) in specified populations (patient is community, individuals viewed collectively), and the application of (since epidemiology is a discipline within public health) this study to the control of health problems.

## **Principles of Epidemiology | Lesson 1 - Section 1**

In epidemiology, the patient is the community and individuals are viewed collectively. By definition, epidemiology is the study (scientific, systematic, and data-driven) of the distribution (frequency, pattern) and determinants (causes, risk factors) of health-related states and events (not just diseases) in specified populations (neighborhood ...
